Wi-Fi Instructions for Androids

1) Connect to the Wi-Fi called SMSU Network OnRamp.
2) Open the internet browser on your device, if you are not redirected immediately try loading a webpage.
3) Click the start button on the page you were redirected to.
4) Click the Logon option that is best suited to you.
   a. For StarID Logon, on the following page you will have to enter your StarID and your current StarID password (this option is only for SMSU registered StarID users).
   b. For Guest Logon, if you received a code in an email click on the Guest with Voucher option; if you have not received a code in an email click on the Guest Self Registration option.
      i. For the Guest with Voucher option, you will enter the voucher code that you received from an email (pictured below) in the text box on the screen.
         ![Guest Voucher Code](https://onramp.smsu.edu)
      ii. For the Guest Self Registration option, you will have a few options one for email, one for a text message, and one if you already have a code from us in an email. For whichever option you choose you will receive a voucher code (If you choose the email option you will need to have a different device that will be able to check the email to get the code it will send)
   c. For Vendor Logon, it will also ask for credentials similar to how the StarID Logon option works but the Vendor Logon is for on campus employees who don’t have a tech id (e.g. Aramark, Johnson Control, Marco)
5) On the next screen there will be two boxes. Click the first one (it says First, Install The App) and choose your method of download. This app (called XpressConnect) is used for loading the configuration needed for accessing the Wi-Fi. If desired you can remove the app once you get Wi-Fi setup.
6) Once the app is installed, click box that says “Next, Configure Your Device.” It will load in the XpressConnect app. Follow the on-screen prompts that will until it says you are connected to the wifi.
